Abstract of the Disclosure

Sheet coils and linear motors including same are disclosed. Also disclosed
are stage units, exposure devices, and microelectronic-device manufacturing
10 methods employing the linear motors. The linear motors exhibit reduced viscous
resistance. The sheet coil includes at least one coil formed as a conductive wiring
trace on an insulative film substrate. The coil includes at least one slit extending in
the coil-winding direction. The slit usually separates the coil into multiple partial
coils that are connected to AC current having the same phase.
